

SKINCERITY RENEW COLLAGEN ACTIVATION | TELOMERE PROTECTION

SKINCERITY RENEW® is at the forefront of how skin care should be approached, which puts NuCerity heads above the rest. The secret? Combining NuCerity's Breathable Barrier® technology with a clear focus on protecting telomeres and stimulating natural collagen and hyaluronic acid synthesis.

TELOMERE PROTECTION

The ends of our chromosomes are "capped" by telomeres, which protect chromosomes by keeping them from fraying and sticking to each other. Each time a cell divides, telomeres get shorter. This process is associated with aging. Skincerity Renew protects telomeres from this shortening process while promoting the body's natural collagen and hyaluronic acid resources to activate and synthesize. In this way, Skincerity Renew protects aging skin cells from oxidative damage and prolongs cell lifespan.

Simply put, Skincerity Renew is the latest anti-aging innovation to come directly from NuCerity's laboratories. It visibly reduces the external signs of aging by inducing aging skin cells to function as young cells.

SKINCERITY RENEW RECOMMENDED USAGE

When you begin using Skincerity Renew, apply at bedtime every night for a minimum of two weeks to speed rejuvenation. Roll-on a thin layer of Skincerity Renew (do not rub in) at bedtime. In the morning, remove remaining film. If Skincerity is difficult to remove at from specific areas, apply (and let dry) a small amount of moisturizer first.

SKINCERITY INGREDIENTS LIST

Acetone, Fluoropolymer, Acrylates Copolymer, Water, Caprylic/Capric Triglyceride-Geranylgeranylisopropanol

SKINCERITY RENEW contains all of the moisture-retaining and vital oxygen-releasing properties of our patented Breathable Barrier® technology while providing the added benefits of natural collagen activation and telomere protection. The result is an age-delaying, time-defying and fragrance-free formula for long-lasting youth and beauty.

This product is not intended to diagnose, treat, cure, or prevent disease.
